WELCOME

The last 12 months has seen amazing results for both stud and commercial producers. This year marks our 21st on farm Angus Sale. All Angus, SimAngus and Simmental bulls have been tick blooded, 7 in 1, vaccinated for Botulism, Pestivirus and tested to ensure negative results. Both our line ups have exciting pedigrees throughout the catalogue to offer a range of heifer and cow mating suitable sires. Our sale drafts have been selected to ensure only functional bulls that can last the distance make the draft.

Highlights for 2022 at Yerwal:

- Our top priced Angus bull sold for \$15,000 to Pat Harold and Lachlan Mckenzie.
- 91% clearance for our Angus sale with a sale average of \$8,400 enabled commercial producers to access bulls from \$5,000-\$15,000.
- Our top priced online Simmental Bull went to Charters Towers, Queensland to Appleton Cattle Co for \$17,500 who run a Simmental stud and large commercial operation.
- Our top priced Queensland Simmental Bull Sale (QSBS) Simmental bull sold for \$34,000 going to Jericho, Queensland to D and A Humphries who run a large scale Simbrah program.
- 100% clearance of our bulls at both our online Simmental and QSBS sale. Bulls sold from \$5,000-\$34,000 for 2022. There was a good spread of number of bulls at different price ranges with quality bulls for all ranges of budgets.
- We entered our first Central Queensland carcass competition in conjunction with JJ fitting with one of our purebred Simmental Steers.
- We donated two Simmental x Angus steers for students at Lucindale Area School and Urrabrae Agricultural School.

Simmentals

Our online sale this year includes; Black Simmental, Traditional Simmental, Red Simmental and SimAngus bull draft. This sale will be conducted through the Elite Livestock's online platform.

Once again we invite Mt Mooney Simmentals to our Simmental sale with four lots; three traditional simmentals and one SimAngus. Quentin and Renee run a stud Simmental operation and large commercial herd based in Culburra, South Australia.

SimAngus Program:

Our SimAngus bulls offers our clients to access the superior weight gain, muscling, meat yield and maternal traits of the Simmental with the meat quality, polled and solid coat colour attributes of the Angus. SimAngus are able to finish well in the pasture or on the feedlot operations. These bulls are sired by Yerwal Estate Lotto Black Simmental bull and out of our Yerwal Angus Cows. They will be offered in our online Simmental Sale 7/2/23 and at the February All Breeds Sale in Gracemere, Queensland 14/2/23.

Angus

This year we go live for the first time offering our clients the opportunity to bid online in the comfort of their home to view our on farm Angus Auction. 43 HBR bulls will be on offer with sale photos and videos available for viewing each lots on Elite Livestock (see page 7 for further instructions).

Our Angus program has some exciting bulls in the draft that include AI sires Chisum and Niagara. Progeny from Sterita Park Resolution L195 continues to be consistent and last the distance. Sprys Supreme sons offer a great spread of data throughout. Home bred sires Yerwal P200, P263, P264 and P4 have been selected on data and phenotype offering a good balance. We value good footed cattle and believe everything starts from the ground up and needs to last the distance; no hoof trimming of sale draft. This year we have opted to DNA profile all sale bulls to provide our clients with the most accurate data possible.

What's happening next at Yerwal?

- Progeny have hit the ground by Texas Quinella Q711 sired by Beastmode. His first sons will sell in 2024.
- The new purchase of stud sire Alkira Renegade R11 will offer our clients calving ease bulls to select from our draft ideal for their heifer programs with the first of his sons being available for 2024.
- Our Angus Embryo program currently includes sires Texas IceMan and Poss Deadwood.
- Our Simmental Embryo program includes new semen sire Kerrah Dictator imported from New Zealand.

Save the dates for 2023

In addition to our online Simmental Sale and on farm Angus Sale a selection of the Yerwal Angus, SimAngus, Red, Black and Traditional Bulls will be available at the following sales:

- 14th Feb 2023, February All Breeds held at Gracemere CQLX, Queensland offering Angus, SimAngus, Red, Black and Traditional Simmentals.
- 23rd June 2023 Agrow Emerald, Queensland offering Traditional Simmentals.
- 31st July 2023 Queensland Simmental Bull Sale 20 offering Traditional, Red and Black Simmentals.

Thank you again for continuing to support our breeding program from all of us here Yerwal Estate Angus and Simmental Stud.

Trevor, Regan, Connie and family

GUEST VENDOR

MT MOONEY
SIMMENTALS

Mt Mooney Simmentals was established in 2008 after trialling many different British and European cattle breeds in our commercial beef operation. Ultimately, we landed with the Simmental breed as it possessed not only the desired attributes for our commercial beef operation but also aligned with our desire to enter the stud breeding market.

In addition to its own stud breeding enterprise Mt Mooney currently runs 200 commercial beef cows on two properties in the upper south east of South Australia (Tintinara). This commercial focus has enabled Mt Mooney to produce Simmental Bulls that achieve exceptional carcass results.

Over time Mt Mooney has purchased both heifers and bulls from some of the leading Simmental studs in the country and have undertaken an extensive embryo transplant program which has already displayed some very promising results. These years of effort, hard work and genetic selection has meant that Mt Mooney now has the consistency and volume of bulls to expand nationally, now also selling bulls successfully into QLD and NSW.

Mt Mooney will have four bulls on display for Beef Week this year at Yerwal Estate. Three traditional, and one SimAngus (registered). The three traditional bulls are all very similar in type, long and soft with plenty of carcass. Our SimAngus has always been a stand out, that will add extra thump into his calves with the Simmental infused in him.

The bulls have all been tick blooded, vaccinated, drenched, semen tested and are ready to go straight to work.

This year both Mt Mooney and Yerwal Estate bulls will be available for sale online via Elite Livestock. Come along to our open day and find out more on how to register for bidding or to view the sale on your phone or device. Updated weight and scan data of sale bulls will be available on the day.

Mt Mooney will work in conjunction with Yerwal Estate on getting your bulls delivered to you.

Renee and Quentin Mooney

IMPORTANT INFORMATION

Inspections

The **Simmental** and **Angus** sale bulls will be available for inspection at the on farm SA Beef Field Day on Monday the 6th of February 2023 from 9am (SA time). The **Angus** sale bulls will be available for inspection on sale day, Monday 13th February 2023 from 9am (SA time). Complimentary refreshments will be available at the sales to all visitors.

Photos and Video

Photos published in this catalogue of the bulls were captured the 4th of January 2023 by GB Creative. Videos of each lot will be uploaded on Elite Livestock website closer to the sale date.

Transport

Complimentary transport is available within South Australia, Victoria, New South Wales and southern Queensland and can be arranged upon request.

Buyers Registrations

Buyers are required to register with the selling agents prior to the commencement of the sale and to display their registration numbers at the fall of the hammer.

Elite Livestock registration instructions will provide buyers more details on how to register prior to the sale (see page 7). If there are any issues with registering or navigation the auction platform please call 1300 259 742 for further support.

Sale Conditions

Conditions of sale by auction in South Australia apply. All sale lots are sold exclusive of GST. Please contact your selling agents to arrange phone bidding.

Agent Rebate

A 3% rebate is offered for outside agents if prospects are introduced to the selling agents in writing at least 24 hours prior to the sale.

Suffix Key

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV: both parents have been verified by DNA.

SV: the sire has been verified by DNA.

DV: the dam has been verified by DNA.

#: DNA verification has not been conducted.

E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Disclaimer

Every effort has been taken to ensure that the information in this sale catalogue is correct at the time of publication. All reasonable care has been taken in its preparation however no responsibility is taken for any inadvertent errors or omissions.

HOW TO REGISTER with ELITE LIVESTOCK AUCTIONS

Simply go to
www.elitelivestockauctions.com.au
using your desktop, laptop, iPad, iPhone
or android device.

Click on the **"Sign Up"** page / link

Create a bidding profile using the bidder
registration page.
*(You can either register as a livestock
agent, company or private buyer)*

Agree to the Elite Livestock Auctions
Terms & Conditions and the Selling
Agents Sale Terms & Conditions as
printed in the official Sale Catalogue

Click **"Register"**

You will then be notified by email that an
account has been created.

Once an account has been created you
are all **"Set to Bid"**

Each Auction can then be viewed by
clicking **"Live Auction"** logo on the Elite
Livestock Auctions website.

Once you receive email notification that
your account has been created please
go to the sale you wish to bid at and
click **"Request to Bid"**

The sale will then approve your appli-
cation to bid and on the sale catalogue
you will see **"✓Bid Request Approved"**

On Sale day simply login, click "Enter
Auction" on the catalogue page and you
can start bidding.
(There is no need for software download)

At the completion of the auction, invoic-
ing will be carried out as per your regis-
tration details by the Selling Agents.

LET'S TALK ABOUT THE 2023 ANGUS AND SIMMENTAL BULL SALE DRAFT

Climate/Conditions - What have they have been run in?

Both Angus and Simmental bulls have been running the majority of the time as one large contemporary group (only exception being to prevent injuries due to fighting, after all boys will be boys) since weaning on farm at Yerwal Estate, Lucindale, SA. This year we had Peter Barr educate the bulls with dogs post weaning. All bulls are familiar with utes, motor bikes and dogs.

Our property has deep sandy soils that make feet a big focus. We don't believe in hoof trimming our bulls and the soil won't hide poor feet. Regan's strict selection of our draft and females ensure our bulls/their progeny can last the distance. Any progeny in the herd that have poor feet (claw set or angle) are instantly culled regardless of the pedigree/data.

Nutrition - what have they been eating?

For the first 12 months of the sale bulls life they are grazed on pastures in the paddock while on mum. Once weaned they go on a high roughage ration while still grazing in the paddock. Our pastures include; clovers and perennial grasses such as phalaris, ryegrass and clovers. Timing of introducing the high roughage feed ration is dependent on the season. We try to maintain an even growth weight gain without having to push them. This means their gut nutrition is not highly disturbed and when taken to their new home with minimal effects to gut health and have the ability to maintain their condition while transitioning into work. We take great care to ensure their mineral level and nutrition is balanced to ensure it is balanced ready for the joining season.

DNA, Polled and Colour Testing

All Angus and Simmental Bulls have been DNA tested. This gives our clients more accurate data in terms of sire verification, coat colour assurance and horn status. We have included some information with further explanation of what these results indicate. In terms on sire verification we are guaranteeing bulls are sire verified for your breeding programs accuracy.

Simmental Horn Status

Homozygous polled means the bull carries two polled genes. Heterozygous polled means the bull will only carry one polled gene and one horned gene.

Bull	Cow	Progeny
Homo Polled	Homo Polled	100% Polled
	Hetero Polled	100% Polled
	Horned	100% Polled
Hetero Polled	Homo Polled	100% Polled
	Hetero Polled	75% Polled, 25% Polled
	Horned	50% Polled, 50% Horned

Simmental Coat Colour

Homozygous Black - the bull carries two copies of the black gene. Heterozygous Black the bull carries one black gene and one red gene. Red (assuming the bull is diluter free) the bull carries two red genes.

Bull	Cow	Progeny
Homo Black	Homo Black	100% Black
	Hetero Black	100% Black
	Red	100% Black
Hetero Black	Homo Black	100% Black
	Hetero Black	75% Black, 25% Red
	Red	50% Black, 50% Red
Red	Homo Black	100% Black
	Hetero Black	75% Black, 25% Red
	Red	100% Red

What is the Fertility and Structural Guarantee?

Yerwal Estate guarantees the structural integrity and fertility of all of its sale bulls. The entry of every bull constitutes a guarantee by the us (Yerwal Estate) that the bull will be replaced or the purchase price* refunded if a bull proves totally infertile within the first 12 months from the date of purchase. All bulls have been vet and semen checked (morphology results to be included in supplementary sheet).

* Without interest, expenses, costs and damages.

What is the Health Status of the bulls?

Yerwal Estate is Johnes Beef Assurance Score (J-BAS) accredited and has a score of J-BAS 6. All bulls were tested free of Pestivirus and have been vaccinated with Ultravac 7 in 1, tick blooded, Pestigard, Botulism and Vibrovax. We recommend annual boosters for 7 in 1, pestigard and Vibrovax.

Scan Data

All sale bulls have been scanned by Mr Max Bowman who is an accredited scanner; Accreditation # 1026 on the 15/11/22. A supplementary sheet will be supplied at the sale and online via Elite Livestock including current weights and scrotal measurements.

UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average,

10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an

animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease/Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate a lower score.
	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate a lower score.
	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a lower score.
Selection Index	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$A-L	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems. The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

Traits Analysed: BWT

Notes: Smudge is homozygous black and has above breed average Eye Muscle, good direct calving ease and low birthweight data. His maternal pedigree is the great Charo background his faultless out of Yerwal Estate Lotto, who consistently breeds thick and functional cattle. Smudge's maternal grandmother Charo J59 is one of our leading Black Simmental donors here at Yerwal Estate and she doesn't miss a beat. If your looking to breed self replacing females that last the distance then you can breed with trust knowing the proven genetic history behind Smudge's pedigree.

Notes: Shot Glass is hetero black and weighed a mere 30kg at birth so he should have fantastic calving ease which is also reflected in his data. His +5.0 for direct calving ease and -0.4 birth weight make him a good sleep easy calving option. His maternal pedigree is the great Charo background his faultless out of Yerwal Estate Lotto, who consistently breeds thick and functional cattle. Shot Glass's maternal grandmother Charo J59 is one of our leading Black Simmental donors here at Yerwal Estate and she doesn't miss a beat. If your looking to breed self replacing females that last the distance then you can breed with trust knowing the proven genetic history behind Shot Glass's pedigree.

Notes: S305 is one of 6 outstanding ET flush brothers with positive fats, good muscle, extremely docile and polled. We have selected this bull for our on farm sale due to his exceptional carcass and type. Cosmetically he has a slight swelling on his jaw due to an old grass seed abscess. He comes with a 100% guarantee. Fully checked out by vet and comes with supporting documentation.

Notes: The youngest calf of our draft, Sugar Ray is a cracking SimAngus calf. He is from a very classy black Simmental female (ZOMPQ029). Easy calving, slick coated, the bone of a simmy with plenty of depth and capacity, yet still maintaining a soft as butter eye appeal. This bull has some serious grunt and will add that extra thump into your calves.

Traits Analysed:

Notes: S195 is actually out of one of our Angus donors K110 therefore he comes with exceptional breeding on both sides and has the physical appearance to back that up. Breed with assurance that the strong maternal lines behind this bull will give you the top shelf replacement females you're looking for to last the distance.

Maximise your Stud Stock Sales with Australia's only dedicated Cattle Stud Marketing Agency

Stud Stock Marketing Services has the end-to-end means to market and promote your stud breeding operation, physical sales, genetic sales, online sales, paddock sales and even Breed Association.

Our team can assist to identify who your primary market is, identify the best ways to market and promote your operation to them and then perform some or all of the necessary marketing/promotion efforts at your request.

Create marketing campaigns, industry leading websites, targeted social media, fit-for-purpose video and TV commercials, high quality print (catalogues/flyers/ newspaper articles) and then there's design and production of banners, shed cards, branded merchandise and more.

MARKETING STRATEGY, PLANS AND CAMPAIGNS

Develop a marketing campaign that includes how, when and where to market and promote. Identify how return on investment (ROI) is measured so that you only spend money where its needed.

BRANDING AND GRAPHIC DESIGN

Align your brand with your desired market segment. Make your brand reflect the quality and professionalism of your operation every time it's visible to a potential buyer.

WEBSITE DESIGN, BUILD, HOST AND MAINTAIN

Create a website that markets and promotes your operation 24/7, 365 days a year. Create an industry leading website that improves your Google Ranking and creates more leads for your business.

DIGITAL MARKETING AND FACEBOOK CAMPAIGNS

Have you ever received metrics on Facebook posts or campaigns you have paid for? Likely not, because they don't stack up and are overpriced. Our offering is affordable, and it works.

VIDEO PRODUCTION AND EDITING

Video sells better than photos or print. Our team can develop videos on anything you require including bulls for sale, stud sales, TV ads and more. We have a three-tiered solution offering pricing for every budget.

LAUNCH OR GROW YOUR STUD SALE

Let us launch, improve or manage your entire bull sale. Only selling out of the paddock or online? We have a solution to sell your animals out of the paddock for a better return, one that has been tested and will get you results.

ELEVATE YOUR CATTLE STUD BRAND

Notes: S111 is a well made Resolution son that combines balance and growth data to open our sale for 2023. His additional higher calving ease make him a suitable sire to produce progeny that will hit a variety of market specs. He is in the Top 3% of the breed for Retail Beef Yield, has moderate birth weight with a great phenotype and pedigree to back him in for any operation.

Notes: S117 has been one of our standout sires of the draft from early on. He is visually very impressive with excellent muscle, very mobile and has great confirmation. S117 also has exceptional growth data being in the top 3% of the breed for 200, 400 and 600 day weight as well as carcase weights. He also maintains positive calving ease and a gestation length in the top 7%. All this equates to extra dollars if he is running in your herd.

Black Simmental Yerwal Estate Senator S017
pictured below will be offered in July sale

In addition to their own sales in South Australia, **Yerwal Estate Simmental Stud** will be offering seventeen bulls at the Queensland Simmental Bull Sale at the CQLX Selling Complex, Gracemere on 31st July 2023.

Our top priced Simmental bull sold for \$34,000 at the 2022 Queensland Simmental Bull Sale. Yerwal Estate Rockhampton sold to D&A Humphries of Jericho, Queensland to who run a large scale Simbrah program.

2022 saw Yerwal Estate draft 13 bulls in the Queensland Simmental Bull Sale at Gracemere (Queensland) in July. In a strong market but with many Queensland Commercial Cattle Operations yet to see rain Yerwal bulls performed very strongly achieving a 100% clearance at an average of \$13,428. Following the sale demand was extremely strong with a number of Yerwal Estate Traditional and Black bulls sold into Queensland in the following months. The Northern market has a preference for a larger framed animal with progeny frequently growing out to suit both the Jap Ox and Bullock Markets over high bos indicus content females. This year Yerwal has carefully selected bulls of a type desirable to Southern Markets which are on offer right here in South Australia with a second consignment once again headed to Queensland in July.

Yerwal Estate has been selling bulls into the Queensland Market for many years and in recent years bulls were sold into Duaringa, Maryborough and Rolleston. These bulls have been used primarily over high bos-indicus content cattle which is a contrast to the bulls sold in southern states. In these locations Yerwal Estate bulls are most

commonly used over Angus, in Commercial and Stud Simmental Operations and also in operations targeting the heavy Vealer trade. This demonstrates the versatility of the Simmental Breed and the strength of Yerwal Estate's offering.

The Queensland Simmental Bull Sale currently has 140 bulls nominated from 13 different studs representing every main land state in Australia. The sale is unique in that the following commitments must be adhered to by all vendors.

DEMONSTRATE INTEGRITY OF BULLS TO PROVIDE BUYERS "PIECE OF MIND"

Science and independent experts are a great way to assist in assessing the suitability of a sale bull. All bulls entered in the sale must be vet checked, DNA verified to sire, mouthed (to provide an indication of age), semen tested (morphology testing optional), EMA, IMF, P8, Rib and Scrotal Circumference measured. Bulls are also weighed at sale location to provide buyers with a true representation of weight.

All bulls entered are 8/8 registered purebred with the Simmental Association of Australia or Fleckvieh Association of Australia to guarantee buyers of hybrid vigour which is critical for an F1 cross.

NO HOOF TRIMMING OR BODY CLIPPING NO EXCEPTIONS

A purchasing decision including consideration of coat or feet type at sale should be genuine. Animal soundness evaluations are to indicate no visual evidence of hoof-trimming on certificates. Vendor participation is also based on head and neck clipping being permitted (though not preferred).

Cutting hair from ears, under pizzle, bottom of tail and spikes on top of tail set with scissors is the preferred presentation of sale bulls for the astute cattle producer.

VACCINATIONS ARE IMPORTANT AND SO IS BIO-SECURITY

No one wants to introduce pesti-virus or any other disease into a breeding herd that is healthy and free from bio-security risks. Mandatory (Minimum) Vaccinations for bulls in the Queensland Simmental Bull Sale are 3-Germ (blooded), 3- Day Sickness, 7-1, Botulism with Bulls tested Pesti-Virus Free.

A SALE WITH A "BIG TAIL ON IT" IS A WASTE OF TIME FOR BUYERS AND VENDORS

In no instances will a bull previously entered in another sale (or advertised for sale independently) be eligible for entry to this sale. There are absolutely no exceptions to this rule and any vendor attempting to do this will be immediately removed from the sale. The tight entry conditions and theme of the sale have also been created to minimise "any tail" in bulls.
